

Wastewater Samplers for the World

Aquamatic Limited

Company Profile

About Aquamatic

Aquamatic Limited is a leading manufacturer of automatic Wastewater Sampling Equipment based in Manchester, United Kingdom. Since 1991 we have manufactured a continuously expanding range of automatic Samplers which are used globally by end-users to meet their water and wastewater sampling objectives. In 2011 we moved into a new purpose-built manufacturing facility which has allowed us to further expand and enhance our product range and services

Our aim is to offer customers a class-leading range of products combined with first rate sales and service support. We make it our responsibility to provide friendly, professional information and support, starting from the initial communications and throughout the whole working life of your Aquamatic equipment. We hope this relationship building approach is evident in all aspects of our company, from our literature to the products themselves

All of the Samplers in the Aquamatic range meet the stringent EN-16479:2014, ISO5667-10 and the UK Environment Agency MCERTS certification standards, ensuring industry leading certification credentials and performance

Aquamatic Samplers are sold worldwide through our network of Aquamatic Certified Distributors, each of these can provide full sales and service support locally within their regions. All of Aquamatic's Distributors benefit from having the full backup support and expertise of the Aquamatic team in the UK

Why choose Aquamatic?

At Aquamatic we only make wastewater sampling equipment, nothing else, this means we focus 100% of our time and effort on the design and manufacture of what we hope is the best range of Samplers on the market

An automatic Wastewater Sampler will give the user significant sampling benefits over traditional manual sampling techniques. Collecting samples using Aquamatic equipment is more reliable and repeatable and will provide for samples which are truly representative of the source effluent, this will lead to more accurate laboratory analysis data which provides for a much clearer understanding of plant performance and where relevant more realistic charges

The current range of Aquamatic Samplers offers users a full choice of Portable and Stationary models for indoor or outdoor sampling applications and a wide selection of configuration options to allow customers to tailor the Sampler to suit their individual requirements. All Sampler models incorporate the highly acclaimed Aquacell Sampler Module which operates on the air pump vacuum sampling principle, giving the user simplicity in use and ultra-reliable operation as well as very accurate sample volumes

From an initial enquiry, through to the ongoing service support after purchase, Aquamatic aim to provide every customer with the very highest level of service. Whether you are a first time purchaser of an Automatic Sampler for your site, or a procurement professional for a regional Water Company, Aquamatic will guide you through the selection process and ensure that whichever Sampler model you purchase, it will be the best model for the application, and configured to suit your needs

Commissioning, Training, In House and/or On Site Service and ongoing preventative Maintenance can all be provided following your purchase
