

Customer Decontamination Statement **for returned equipment**

UK Regulations: *Health and Safety Act 1974*
Control of Substances Hazardous to Health Regulations 1994

Due to the nature of some applications for which Aquamatic sampling equipment is used, it is the responsibility of the customer to ensure that the equipment is clean and free of contaminants before it is returned following rental or for service. This is to ensure the safety of Aquamatic personnel and to comply with the above listed legislation

As such a customer signed Decontamination Statement must accompany any piece of equipment being returned to Aquamatic Ltd. Failing to provide this documentation may mean the equipment cannot be accepted, or alternatively lead to additional costs being incurred for decontamination / cleaning by Aquamatic

If the equipment is returned in more than one consignment, then a copy of this Decontamination Statement should be returned with each consignment
