

Aquamatic Ltd Company Profile

Established in 1991, Aquamatic Limited is a leading manufacturer of automatic Wastewater Sampling equipment based in Manchester, United Kingdom. Today our automatic Samplers are used extensively by Water Companies, Industrial Companies and Environment Agencies to help monitor and control wastewater discharges in factories, treatment works and water courses around the world.

Available both direct from our factory in the UK and around the world via a network of Distributors, our Samplers will automate the sampling process, ensuring that your samples have been reliably taken from the correct point in the channel, at the right time and securely preserved in optimal conditions whilst awaiting collection and analysis.

An automatic Wastewater Sampler will give the user significant sampling benefits over traditional manual sampling techniques. Collecting samples using Aquamatic equipment will help provide reliable and repeatable samples which are truly representative of the source effluent, this will lead to more accurate laboratory analysis data which then provides for more accurate charges (if applicable) and where relevant a much clearer understanding of plant performance.

Our current range of Samplers comprises a full choice of Portable and Stationary models for indoor or outdoor sampling applications and a wide selection of configuration options to allow customers to tailor the Sampler to suit their individual requirements. All Sampler models incorporate the highly acclaimed Aquacell Sampler Module which operates on the air pump vacuum sampling principle, giving the user simplicity in use, reliable operation and very accurate sample volumes.

All of the Samplers in the current Aquamatic range meet the stringent EN-16479:2014, ISO5667-10 and the UK Environment Agency MCERTS certification standards, ensuring industry leading certification credentials and performance.

From the initial enquiry and equipment supply through to ongoing service support, Aquamatic aim to provide every customer with the very highest level of service. Whether you are a first-time, one-off Sampler purchaser or a Water Company framework procurement professional, Aquamatic will carefully guide you through the full selection / configuration process and therefore ensure that whichever Sampler model you purchase it will be the best solution for your application.

Commissioning, Installation, Training, in-house and/or on-site Service and ongoing Contracted preventative Maintenance can all be provided for your Aquamatic sampling equipment.

Aquamatic Samplers are available worldwide both direct from our factory and through our network of Aquamatic Certified Distributors. Each of these approved Distributors can provide full sales and service support locally within their regions. All benefit from having the full sales / technical support and expertise from Aquamatic UK.
